Protect Your Crops From Nematodes

During the 2023 crop season, nematodes posed a significant challenge for soybean farmers statewide. Nematode-infested soybean plants can lower yields and negatively impact the profitability of a soybean crop. Thanks to the [University of Arkansas System Division of Agriculture Cooperative Extension Service's](#) complementary nematode tests, funded by checkoff dollars, farmers can assess their crops' future health. This is a great example of how farmers' checkoff dollars are benefiting them. Producers can claim their free test by contacting their [county's extension office](#).
